At the 3' end, an Xhoi site was engineered in to allow subcloning into pET21d, which also puts 6 histidines at the C-terminus that were used for purification. Location/Qualifiers

                                                                                       Natilitetic protein receptor B - for diagnosis and treatment of kidney failure. heart failure, hyperaldosteronism, glaucoma etc. Claim 3: Fig 1; 49pp; English.

The sequence was derived from the DNA encoding natriuretic peptide receptor B, NPRB, having quanyl cyclase (GC) activity and protein kinase activity. The DNA can be inserted into expression vectors for the prodn. Of the protein, opt. after being mutated to produce II4,952). The protein has a mol wt. of 115 kD (calculated Mrativity.) The protein (or variants) can be used in treatment of natriuretic peptide disorders, and also to isolate peptides using affility chromatography. Antibodies with affinity for NPRB can

Oligonucleotide probe MK14-A consists of nucleotides 5-95 of 1 (Q51735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also Q51735-45 and Q51747-59.

                                                                                                                                                                                                                                                                                                                                                                                                                             Introducing random point mutations into nucleic acods -
Thirducing random point mutations into nucleic acods -
Thirducing random point mutations and screening a primer, elongation,
maisincorporation, completion of molecules and screening.
The maisincorporation completion of molecules and screening.
The maisincorporation completions were introduced into the alpha fragment of Escoli beta-galactosidase. The wild type sequence was obtained as a single stranded template and an oligonucleotide was hybridised to to generate a popon of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3 ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system.
The sequence covers all 176 difft base substitutions, most of which see also P80575.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Sold 68 is a generic DNA sequence used to generate random TSAR (Totally
COMPGES is a generic DNA sequence used to generate formula can also be
represented as follows: X(NNB) LIT(TCC) (NNB) 7 (TCC) (NNB) 10. X
and Y are flanking restriction sites (X is not the same as Y) that are
not specified further. Other generic sequences are shown in Q70466-68
other specific peptides generated by these generic sequences are shown in
RS5191-54. TSARs are concatenated by these generic sequences are shown in
RS5191-54. TSARs are concatenated by these generic or peptides
comprising at least two functional regions - a binding domain with
affinity for a ligand and a second effector peptide portion that is
chemically or biologically active. They may further comprise a linker
peptide between the 2 domains. The oligonuclectides are also designed so
that the expressed peptide contains 2 or 4 cysteine residues positioned

Generic DNA sequence to generate a random TSAR petide library.
TSAR; totally synthetic affinity reagent; synthetic; binding domain; effector domain; concateneated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              34 bgcaggycgacbcyrraggnycccggggywccgagcycgaayycdchygccgymrttthh 93
Random point mitations were introduced into the alpha fragment of E.coll beta-galactosidase. The wild type sequence was obtained as a single stranded template and an ollogoucleodtie was hybridised to it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which see also P80575.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

Tidentifying proteins or peptide(s) which bind a ligand - by
screening a recombinant vector library expressing fusion proteins
compitising a binding domain and an effector domain

Disclosure; Page 35: 255pp; English.

O70467 is a generic DNs sequence used to generate random TSAR (Totally
C70467 is a generic DNs sequence used to generate random TSAR (Totally
C70467 is a generic DNs sequence used to generate random TSAR (Totally
C70467 is a generic DNs sequence used to generate random TSAR (Totally
C70467 is a generic DNs STAND) IG(TGC) (NNB) IG(NNB) IG(NNB) IC (NNB) IG(NNB) IC (NNB) IC
C704 is a follows: X(NNB) IG(TGC) (NNB) IC (NNB) IC (NNB) IC
C704 is a further. Other generic sequences are shown in O70466-68.
C705 is a legal of the generated by these generic sequences are shown in O70466-68.
C706 is a legal of the sequence of concatenated heterofunctional proteins or peptides,
C706 is a legal of a second effector peptide portion that is
C707 in or inpantally active They may further comprise a linker
C708 in or ilanking, the unpredicted or variant residues residues
C709 in or ilanking, the unpredicted or variant can be used in vivo to compana companially or biologically active may expense the conformational rigidity to the peptides. These residues or companial c
                     confer some degree of conformational rigidity to the peptides. The TSARS or composins, comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, e.g. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARS are easily characterised and have designed activity sequence 114 BP; 0 A; 2 C; 2 G; 2 T;

C Determining the nucleotide sequence (I) of a target polynucleotide (T) comprises: (a) generating from T a plurality of fragments that cover T; (b) attaching an oligonucleotide tag from a repertoire of tags, to each fragment such that all the same fragments have the same tag, and all different fragments have different tags; (c) sorting the fragments by specifically hybridising the tags with their respective tag complements; (d) determining (I) of a portion of each of the fragments: and (e) determining (I) of T by collating the sequences of the fragments. The tagging system can be used with single hase sequencing methods to sequence polynucleotides up to several kilobases in length. The tagging system permits many thousands of fragments of a target polynucleotide to be sorted onto the sequence represents and sequenced simultaneously. This sequence represents a primer which could be used to reverse transcribe mRNA. If the amplified product is then needed to be
                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            attached to a solid phase support a sequence like the one given in T14323 may be used. The mRNA would then be removed and the second strand of cDNA produced using a primer with a similar form to that described in T14324. After restriction enzyme digestion, the conjugate would have the formula described in T14325. Sequence 67 BP; 3 A; 13 C; 4 G; 20 T;
                                                                                                                                                                                                                                                                                                                                                                                                                 16-JAN-1997 (first entry)
Primer used in the labelling and sorting of nucleotide molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

This generic Pormain and be represented as follows. 7(TGC)(NNB)10-

This generic formula can be represented as follows. 7(TGC)(NNB)10-

Transity of the same as Y) that are not specified further. This sequence generic specifies that are cloveribed in structure. Other generated by these generic sequences are shown in 70/465-68. Other specific peptides generated by these generic sequences are shown in 70/465-68. Other specific peptides generated by these generic sequences are shown in 70/465-68. Other specific peptides concatenated heterofunctional proteins or peptides. Comprising at least concatenated heterofunctional proteins or peptides. Comprising at second effector peptide portion that is chemically or biologically active rhey may further comprise a linker peptide between the 2 domains.

The oligonic lectides are also designed so that the expressed peptide conformational rigidity to the peptides. These residues confer some degree of conformational rigidity to the peptides. The TSARs or compsis. Comprising a TSAR binding domain can be used in vivo to deliver a chemically or or enzyme, to the specific target or on the cell. They can also replace the function of macromolecties, eg. monoclonal or polyclonal antibodies conformation or in vivo antibody process.

Commation or in vivo antibody process.

Conformation or in vivo antibody process.

Conformation or in vivo antibody process.

Conformation or in vivo antibody accounting a are easily characterised and have designed activity allowing direct and rapid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

7070467 is a generic DNA sequence used to generate random TSAR (Totally 7070467 is a generic DNA sequence used to generate communication of proteins of proteins and the flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in 7070466-68.

70 ther specific peptides generated by these generic sequences are shown in R55151-54. TSARs are concatenated beforefunctional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chemically or biologically active. They may further comprise a linker peptide between the 2 domains. The oligonuclectides are also designed on that the expressed peptide contains 2 or 4 cystelne residues positioned in compense compense of conformational rigidity to the peptides. These residues or compense compense of conformational rigidity to the peptides. The TSARs in TSARs in the compense of compense of conformational rigidity to the beytides. The TSARs of the compense of compense of conformational rigidity to the beytides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  deliver a chemically or biologically active moiety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

PPT Gentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins

PPT Gentifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins

PPT Screening a recombinant vector library expressing fusion proteins

PPT Screening a plading domain and an effector domain

PPT Screening a sequence used to generate random TSAR (Totally

COTOMAS STATEMENT AFFINITY REAGENTS) PEPTIGESTHIS GENERAL STATEMENT AFFINITY REAGENTS) PEPTIGESTHIS GENERAL SAME AS A SCREENING SCREENING SCREENING STATEMENT AFFINITY REAGENTS (NNB) (TGC) (NNB) 112 (NNB) 14 (TGC) (NNB) 13. X

AND X are flanking restriction sites (X is not the same as Y) that are not x peptide further. Other generic sequences are shown in COTOMAS are concatenated beterofunctional proteins or peptides.

CC THER SPECIFIC PEPTIGES GENERAL SEASON IN 1070466-68.

CC COMPISSING A LEAST WO functional regions - a binding domain with a finity for a ligand and second effector peptide portion that is comparised between the 2 domains. The oligonucleotides are also designed to that the expressed peptide contains 2 or 4 cysteine residues positioned in or flanking, the unpredicted or variant residues reasones residues confer some degree of conformational rigidity to the peptides. The TSARS or compension a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety, eg. metal ion, calliver a chemically or biologically active moiety, eg. metal ion, calliver be perided to replace the function of macromolecules, eg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain Disclosure; Page 36: 255pp; English.
070470 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagents) peptides. This generic formula can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 10-APR-1995 (first entry)
Generic DNA sequence to generate a random TSAR peptide library.
TSAR: totally synthetic affinity reagent; synthetic; binding domain; effector domain; concatenated heterofunctional protein; linker;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    3 banbanbanbanbanbtqcaabaabanbanbanbanbanbanbanbanbanbanban

represented as Lollows: Alternal Processing Science (CAC)2 (NNB)Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. The peptides generated by this and other generate sequences (OT04173) have invariant histidine residues incorporated into variant sequences. TSARs are concatenated by this and concorporated into variant sequences. TSARs are concatenated the fractional proteins or peptides, comprising at least two functional regions - a binding domain with affinity for a ligand and a second effector peptide portion that is chanically or biologically active. They may further comprise a linker peptide between the 2 domains. The TSARs or compsus. comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, eg. metal ion, and compsus. comprising a TSAR binding domain can be used in vivo to call they can also replace the function of macromolecules, eg. monoclonal or polytohal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing direct and rapid detection in a screening process.

Page 33, 255pp; English.

7070468 is a generic DAN sequence used to generate random TSAR (Totally Cynthetic Affanity Reagents) peptides. This generate formula can also be represented as follows: X(NNB)117GC)(NNB)7CTC)(NNB)7CTC)(NNB)10Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q0466-68.

70 ther specific peptides generated by these generic sequences are shown in R5515-54. TSARs are concented by these generic sequences are shown in R5515-54. TSARs are concented a Comprising at least two functional regions - a binding domain with a fillity for a ligand and a second effector peptide portion that is chemically no biologically active. They may further comprises a linker chemically no biologically active. They may further comprise a linker between the 2 domains. The oligonoclectides are also designed to that the expressed peptide contains 2 or 4 cysteine residues positioned

in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs or comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active molety, eg. metal ion, radioisotope, peptide, toxin or enzyme, to the specific target or on the cell. They can also replace the function of macromolecules, eg. monoclonal or polyclonal antibodies and therefore circumvent the need for complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity sequence 114 BP; 0 A; 2 C; 2 G; 2 T; 8888888888888

double-stranded cDNA was size selected, lighted to ECC RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Ecc RI sizes of a modified pTT73 vector (Pharmacia). Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from normal foreskin melanocytes (FS374) was kindly provided by Dr. Anthony P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    490 bp mRNA EST 10-JAN-1996

Tot. derivs. of bifunctional penicillin binding protein (BPBP) - opt. lack transglycosylase activity, useful to identify and assay for anthodies or cepts. Which bind BPBPs

Claim 2: Pages 65-68; lobgp: English.

Claim 2: Pages 65-68; lobgp: English.

The present sequence is a soluble variant of the S. pneumoniae penicillin binding protein (BPBP) 1A, which lacks the lst 38 amino acid residues of the wild type protein. Wild type PBP is a bifunctional protein, which binds the cell membrane when expressed or a bacterial cell, having transglycosylase and transpeptidase activities. The variant protein (NCIMB 4065) in conjunction with a labelled anti-lifunctional PBP monoclonal antibody, can be used to identify and assay for cpds. which bind bifunctional PBP. Such cpds., as lmbibitors of bifunctional PBP have a potential use in therapeutic cpds. which inhibit the growth of antibiotic resistant constraint. The soluble variant may also be used in X-ray
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 371 vynwdrgyf-gnitlgyalggsrnvpavetlnkvglnraktfl-nglgidypsihysnai 428

Useful in treating epilepsy, cognition, emesis, pain, asthma, peripheral vascular disease, hypertension, etc. Claim 1; Fig 3; 82pp; English.
The amino acid sequence (W04217) of rat dorsal root ganglion P2x Teceptor was deduced from a CDNA clone (T33854) isolated from a CDNA library. P2x receptors (see also W04215-16 and W04218) are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 105; DB 19; Length 682

This sequence represents a H. pylori cytoplasmic protein.

This sequence represents a H. pylori polypeptide blinding compounds, useful as potential H. pylori polypeptide blinding compounds, useful as potential H. pylori life cycle activators or inhibitors.

The genomic sequence of H. pylori 16 cycle activators or inhibitors.

The genomic sequence of H. pylori farct 55679) was determined from cyclings generated by mechanically shearing the bacterial DNA. The sequence of H. pylori for ONE of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To dentify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide Sequence 229 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          81 eeidalalefgaii-eqklfdrghlnsevmafidkhyqnyifhiasaalhselqvlcefl 139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 ILV-GVGLPVSSIILGETLSVYCNLL-HSNSFISNNYIATIYKAIGTFLFGAAASQS-LT 117

For treating schizophrenia

Disclosure; Column 49-51; 184pp; English.

Enforced R W0257-W02720 represent a range of G-protein coupled receptor

CGPR) proteins welected from cAMP, adenosine, muscarinic acetylcholine, adrenergic, thrombin, endochelin, bombesin, endocrine, rhodopsin, opsin, adrenergic, thrombin, endochelin, bombesin, endocrine, rhodopsin, opsin, cadrant, cytomegaloviral and other GPR proteins. The receptor proteins were used to design polypeptides, pref. based on the transmembrane domains, for use in G-protein coupled receptor ligand binding assays.

The polypeptide fragments retain biological activity such as binding GPR ligand or modulating GPR ligand binding to a GPR (see W02747-W02999) for examples of polypeptide fragments). The polypeptide fragments can be used in compositions for treating subjects such as pathology related to a GPR abnormality e.g. a psychotic disorder such as
                                                                                                                                                       ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    7

G-protein coupled human m2 muscarinic acetylcholine receptor.
G-protein coupled receptor; ligand binding assay; transmembrane domain; schizoptenia; dopamine; cAMP; adenosine; thrombin; adrenergic; opsin; muscarinic acetylcholine; endothelin; bombesin; endocrine; rhodopsin; odorant; cytomegalovirus; serotonergic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   05-JUN-1996 (first entry)
G-protein coupled human m2 muscarinic acetylcholine receptor protein.
G-protein coupled receptor; ligand binding assay; transmembrane domain; psychotic disorder; schizophrenia; dopamine; cAMP; adenosine; thrombin; muscarinic acetylcholine; adrenergic; endothelin; bombesin; endocrine; rhodopsin; opsin; odorant; cytomegalovirus.
                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
             ATP. Recombinant Pox receptors can be produced in prokaryotic or eukaryotic, pref. mammalian, host cells. Their widespread distr. throughout the body and possibly numerous physiological roles make P2x receptors useful for the screening of new cpds. (agonists or antagonists) for the treatment of a number of pathological states. Sequence 397 AA;
 ligand-gated ion channels that open upon binding of extracellular
                                                                                                                                                       ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 93; DB 19; Length 317; Pred. The sequences given in R39259, R39261 and R39263 represent the human sometostatin receptors (SSTR)-1, SSTR-2 and SSTR-3. The DNA encoding these procebins was isolated from total human pancreatic islet DNA. These procebing was lacolated from total human pancreatic islet DNA. These DNA sequences may be placed under the control of a suitable promoter and used to transform a host cell. The DNA sequences and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    these proteins may be used in screening assays for testing candidates including agonists and anteaponists of SSTR polypeptides. The assays may be used to discriminate candidate substances with desirable properties specific to SSTR polypeptides. The isolated substances may be used in a wide range of aplications eg. diagnosis of various human tumours. Fragments of these DNA sequences may be used as probes in the isolation of other SSTR-encoding clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  35 pspaglavsgvlipl-vylvvcvvgllgnslviyvvlrhtaspsvtnvyilnlaladelf 93

                                                                                                                                                                                                                                               are non-covalently associated transmembrane glycoprotesins. Il alpha chains and 6 beta chains have been recognised in man. Each alpha subunit tends to associated transmembrane glycoprotesins. Il alpha subunit tends to associate with only one type of beta subunit but there are several exceptions. Integrins mediate (in part) the interaction of calls with the extracellular matrix, forming a link between the extracellular matrix and the cytoskeleton. They may transmit signals from the extracellular to the intracellular subunit of an alpha6 beta4 integrin. This sequence is the alpha6 sequence 1073 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alpha 6A integrin subunit.

The sequences given in R28821-22 are the human alpha 6A and 6B
The sequences given in R28821-22 are the human alpha 6A and 6B
The sequences given in R28821-22 are the human alpha 6A and 6B
Thegrin subulits. Integrins are a family of cell surface receptors
which serve cellular adhesion functions. These receptors form a link
between the extracellular matrix and the cytoskeleton through their
changes to various extracellular components. Each integrin receptor
is a heterodimer comprised of an alpha and a beta subunit. Each alpha
subunit tends to associate with only one type of beta subunit but
there are several exceptions to this rule. These integrins correspond
to the laminin receptor. The cytoplasmic domain of the 6A and 6B
integrins differs from previously isolated alpha 6 integrins. The
changes alpha 6B was isolated from human choriocarcinoma cell line JAR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Helicobacter pylori nucleic acid sequences and related polypeptide(s) - useful for vaccines to treat or prevent H. pylor infection, and to detect Helicobacter claim 61; Page 1040-1041; 1481pp; English. The present sequence is a Helicobacter pylori protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically
                                                                                                                                                                                                                                                                                                                                        Integrin alpha sub-unit cytoplasmic domain polypeptide(s) - used for prodn. of antibodies and in detection of integrin sub-units
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   binding compound; bacterium; life cycle, activator; bacteria; inhibitor; duodenal ulcer disease; chronic gastritis; diagnosis

shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. Pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from production, p.g. in E. coli hosts.

The sequences given in R2881-22 are the human alpha 6A and 6B integrins subunits. Integrins are a family of cell surface receptors which serve cellular adhesion functions. These receptors form a link between the extracellular matrix and the cytoskeleton through their between the extracellular matrix and the cytoskeleton through their is a heterodimer comprised of an alpha and a beta subunit. Each alpha subunit tender comprised of an alpha and a beta subunit. Each alpha there are several exceptions to this rule. These integrins correspond to the laminin receptor. The cytoplasmic domain of the 6A and 6B integrins differs from previously isolated alpha 6 integrins. The human alpha 6B was isolated from human choriocarcinoma cell line JAR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    D NOT CONTROL OF THE 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             embryonic, evolutionary, spermatogenesis, tumorigenesis and histocompatibility studies, such as characterisation of the malespecific H-Y antigen. Antibodies to the SMCY protein can be used in imunological testing, and in a sex selection and screening system for humans and non-human species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       997 vrvtvípskt-vagysgvpwwiilvailagilmlallvíilwkcgíík-rsrydd 1049

DNA and CDNA of hepatitis C virus • useful as probes for diagnosing HCV inhead to the claim 3: Page 6-18: 44pp; Japanese.

CDNA was prepared from HCV genomic RNA. Full-length clone JK1-B and 14 shorter clones were isolated by PCR amplification.

Primer/probes derived from the sequences of these clones can be used in diagnostic assays for HCV. See also Q40425-Q40439.

The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant
